

## Railway Car Builders - United States and Canada - 1902

There are a number of reasons why the research of street railway rolling stock is difficult before 1900. The formative years involved competing operating companies, bankruptcies and mergers which contributed to renumberings, scrapping of primitive equipment which was technologically obsolete and inadequate to the rapid expansion of business in the electric era. Most of the early records were lost, particularly for the smaller companies and there are virtually no surviving order books of car builders prior to 1900. Records of companies such as Jones, Ellis, New Castle, Gilbert, Brooklyn & New York Supply, Feigel, and Massachusetts Car disappeared without a trace.

One source which can often confirm the builder who supplied your favorite 19th century street railway is *American Street Railway Investments*. During the 1890s, it published detailed annual reports on the various street railways. Among the questions which the companies were asked to answer was the identity of the builders of their rolling stock. The responses, as one might expect from a questionnaire, varied from one respondent to the next. Some companies didn't bother to answer. Other companies appear to have made incomplete responses. Still the information that was submitted and published provides a valuable reference to builders of the 1890s. This information can be used to confirm that a street railway owned rolling stock built by a particular company. It cannot be used to conclude that the street railway did not own cars from that builder, although the likelihood that they did is considerably reduced if the builder is not mentioned.

The list below was compiled from the 1902 issue of *American Street Railway Investments*, and lists every builder noted by every company which answered this question in 1901 or 1902. I prepared it in February 2004 to use as a quick reference (and to save wear and tear on an increasingly fragile book) in response to a number of questions about early rolling stock. Horse and steam lines, and the location of some of the more obscure properties are indicated in the notes column.
