

Laconia Car Company — Car orders for Street Railway Properties

Explanatory notes.

The basis of this list is a typewritten set of cars containing order number, company, number of cars, type of cars, date ordered, and trucks (when trucks were provided as part of the order). Information on single- or double-end operation, roof design, and car numbers are derived from a variety of other sources, primarily pictorial.

* Capital letters indicate resales: B = second hand; C = third-hand, etc.; M = cars preserved in museums; P = cars parts; R = Rebuild jobs; Z = Cancelled orders. Lower case letters indicate orders split between several types of cars.

Length: N indicates open cars with no center aisle. A indicates those with aisle. OB indicates length over body. OA indicates length over all.

Car numbers: These do not appear on the original builder list and have been added from a variety of sources. We request that any questionable numbers be pointed out in order that their validity can be verified or corrections made. Cars groups using even numbers only are shown with an e between the inclusive numbers as "36 e 44." Odd numbers are shown as "21 x 29."

A car number followed by a + sign - such as "25+" indicates a pictorial record of that car order made by the builder, the other numbers not having been found.

Trucks/Notes. Original truck types listed when built by Laconia. Location of use shown when the company name does not clearly indicate. Construction or management companies and individuals ordering cars when the cars were not ordered in the name of the operator are given.

Missing order numbers are for steam railway equipment, or were not found in the existing records.

Our thanks to O. R. Cummings for providing original records and for his assistance in the preparation of this list.
